

DPUmesh control plane — implemented authority and runtime placement

Kubernetes states identity; the host proves process ownership; the DPU verifies and enforces.

How to read this figure

grant	controller-signed Pod/container/slot/nonce binding	feed	complete signed document installed atomically
slot	one Device Plugin resource and one Unix socket	node mTLS	URI SAN spiffe://dpumesh.io/node/<name>
broker	one isolated host child owning DOCA objects	fail-closed	invalid or unavailable authority admits no new slot
